Silicon Worksheet Notes

Data Sources

Sources of data for the silicon worksheet are the mineral statistics publications of the U.S. Bureau of Mines and the U.S. Geological Survey: Minerals Yearbook (MYB) and its predecessor, Mineral Resources of the United States (MR); Mineral Commodity Summaries (MCS) and its predecessor, Commodity Data Summaries (CDS); and Mineral Facts and Problems (MFP). The years of publication and corresponding years of data coverage are listed in the References section below. Blank cells in the worksheet indicate that data are not available.

Reported Production

Production data for the years 1954–68 were recorded from the MFP. Production data for the years 1969–2003 were reported in the CDS (1969–77) and the MCS (1978–2003). Production data for the years 1954–2003 represent the total gross production, by silicon content, of various grades of ferrosilicon and silicon metal that were produced annually within the United States.

Reported Shipments

Shipment data for the years 1961–2003 were reported in the MYB. Shipment data for the years 1961–2003 represent the total silicon content in 48% ferrosilicon, 63% ferrosilicon, 76% ferrosilicon, 85% ferrosilicon, 88% ferrosilicon, 90% ferrosilicon, 98% silicon metal, 45% ferrosilicon briquets, and other miscellaneous silicon-containing alloys that were shipped annually to domestic recipients.

Reported Imports

Import data for the years 1923–63 were reported in the MR and MYB. Import data for the years 1964–78 were recorded from the MFP. Import data for the years 1979–2003 were recorded from the MCS. Import data for the years 1923–2003 represent the total silicon content in all silicon-containing materials that were imported into the United States for consumption purposes.

Reported Exports

Export data for the years 1964–78 were reported in the MFP. Export data for the years 1979–2003 were reported in the MCS. Export data for the years 1964–2003 represent the total silicon content in all silicon-containing materials that were exported from the United States to foreign recipients.

Reported Stocks

Stock data for the years 1964–78 were recorded from the MFP. Stock data for the years 1979–2003 were reported in the MCS. Stock data for the years 1964–95 represent the total silicon content in all silicon-containing materials that were held annually within industrial producer and consumer stockpiles. Stock data for the years 1996–2003 represent the total silicon content in all silicon-containing materials that were held annually within industrial producer stockpiles.

Reported Apparent Consumption

Apparent consumption data for the years 1954–68 were reported in the MFP. Apparent consumption data for the years 1969–2003 were reported in the CDS (1969–77) and the MCS (1978–2003). Apparent consumption data for the years 1954–2003 represent the total silicon content in all silicon-containing materials that were consumed annually within the United States.

Estimated Unit Value (\$/t)

Unit value is the value in actual U.S. dollars of 1 metric ton (t) of silicon apparent consumption. Unit value was estimated by weight averaging the value of production and imports. Prior to the year 1961, only import values were used because of lack of production data.

Estimated Unit Value (98\$/t)

The Consumer Price Index conversion factor, with 1998 as the base year, is used to adjust unit value in current U.S. dollars to the unit value in constant 1998 U.S. dollars.

Reported World Production

World production data for the years 1964–78 were reported in the MFP. World production data for the years 1979–2003 were reported in the MCS. World production data for the years 1964–2003 represent the total silicon content in all silicon-containing materials that were produced annually.
